

Wondrous Wisdom

A GRAPHIC NOVEL

Real questions.
Deeper understanding.
A more human future.

Vilnius, in a not-too-distant future.
Mira arrives at the Garden of Investigations —
a place where people study reality, cultivate
understanding, and imagine a wiser world.

So this is it...
Part library, part observatory,
part orchard? It's bigger
than I expected.

Beautiful.
And a bit intimidating.
What am I even doing here?

THE GARDEN
OF INVESTIGATIONS

TOMORROW

Books, telescopes,
trees... This place
actually exists.

Maybe there's something
real here after all.

CURIOSITY
KINDNESS
RIGOR
A WISER
HUMANITY

Welcome, Mira.
I'm Andrius.

I've been documenting
Wondrous Wisdom since 1982 —
as a language of wisdom
and a language of
cognitive frameworks.

1982? That's a long time.
So what is this, exactly?
A philosophy? A theory?
A movement?

It's a way to understand
and navigate reality **together**.
It's meant to be lived —
by all of us, as a community
in wisdom.

I'm curious... but also skeptical.
The world already has so many ideas.
Why another one?

This isn't about adding more ideas.
It's about speaking a language of wisdom,
working together as a community in wisdom,
and fostering a culture of wisdom.
We explore fundamental questions, using
a small number of clear cognitive frameworks.
They help us see more clearly, think more deeply,
and act more wisely — together.

Mira isn't convinced yet.
But something in his words
stirs her curiosity.

The next morning. A whiteboard, a view over Vilnius, and a new way of looking at everything.

Everything we can talk about, experience, or imagine
belongs to one fundamental concept: **everything**.

It's a required concept — we cannot escape it.

To work with it, we start by understanding
its four key properties.

Everything?
That's a big word.
What does it
actually mean?

SAME REALITY.
MORE WISDOM.
TOGETHER.

EVERYTHING

A concept we cannot escape

1. No external context

There is nothing outside
everything. Nothing is
beyond it.

2. No internal structure

Everything has no internal
structure. It is not made of parts
within itself.

3. The simplest algorithm / no filter

Everything is the simplest
possible algorithm.
It does not filter anything
out — everything is included.

4. A required concept we cannot escape

We cannot think, speak,
experience, or imagine anything
without it. It is always already
the context.

EVERYTHING

No outside.
Includes all.

From this fundamental concept of everything, we can use a few simple perspectives
to help us structure our thinking, participation, and knowledge. These are not extra theories —
just basic ways to work with what is already here.

So these perspectives
help us navigate everything?
Simple, but powerful...

THREE WAYS TO WORK WITH EVERYTHING

1. Two perspectives for structuring existence

Two complementary ways to understand
what exists within everything.

Both perspectives are valid and useful,
depending on what we are exploring.

2. Three perspectives for structuring participation

Three ways to engage in the unfolding
of everything.

These three perspectives form a natural cycle,
often recurring in our personal and collective lives.

3. Four perspectives for structuring knowledge

Four fundamental questions for exploring
anything within everything.

These four perspectives help us explore,
describe, explain, and make sense of anything
we encounter.

It's surprisingly clear.
Simple, but profound.
I can see how this could change
the way we think — and live.

This is just the beginning.
These frameworks are a shared starting point.
From here, we explore together — as a community in wisdom,
speaking a language of wisdom, and fostering a culture of wisdom.

SAME QUESTIONS.
A WISER TOMORROW.

Later that morning, inside the Garden of Investigations...

This place is incredible. It's like a library, an observatory, a garden, and a workshop all at once.

That's the idea, Mira. Wondrous Wisdom grows here, through real investigations — by many people, over time, in many fields.

I'm still trying to get this straight. Are we just collecting interesting ideas from everywhere? How do we keep it from becoming a random mix of everything?

Good question. Wondrous Wisdom manifests in four connected planes. They give us a structure.

Documentation, Interpretation, Context, and Culture.

Each plane plays a different role, and together they help us understand the deepest questions.

CURIOSITY
+
DISCIPLINE
+
DIALOGUE
→
A WISER HUMANITY

Mira starts taking notes...

Wondrous Wisdom — four planes:

1. Documentation
2. Interpretation
3. Context
4. Culture

Many fields can help: math, physics, psychology, neuroscience, history, sciences, arts, moral disciplines ... All connected.

So each plane is necessary? We can't skip any of them?

Exactly. They support each other. Let's look at each one in turn.

Across the Garden, people from different fields work together...

Advanced mathematics, mathematical physics, psychology, neuroscience, the history of ideas, sciences, arts, and moral disciplines — all of these can help us recognize or test cognitive frameworks.

Different perspectives, same human quest.

MORE PERSPECTIVES
CLEARER
UNDERSTANDING
A MORE
HUMAN FUTURE

The Four Planes of Wondrous Wisdom

A structure for understanding the deepest questions

Different planes.
A fuller view.
A wiser humanity.

1. Documentation

The mental facts

Cognitive frameworks, the "mental facts," and the limits of imagination.

1. DOCUMENTATION

What are the facts? What do we know? What are the limits of our imagination? Cognitive frameworks help us organize what we can think about.

2. Interpretation

The meaning of the facts

The big picture, theories of God, a primordial God from whose investigations the cognitive frameworks unfold.

2. INTERPRETATION

What do the facts mean? How do they fit together? What is the bigger picture? We explore theories of God — including a primordial God from whose investigations the cognitive frameworks unfold.

3. Context

Sharing for understanding

Sharing facts and theories so people can share understanding with each other.

3. CONTEXT

How do we share this with others? Through dialogue, teaching, writing, and open exchange, so people can build understanding together across different fields and cultures.

4. Culture

A community of thinkers

A community growing fluent in the language of wisdom, an investigatory community of independent thinkers.

4. CULTURE

Who are we becoming? A community of independent thinkers, growing fluent in the language of wisdom, across generations and cultures.

SAME REALITY. MORE PERSPECTIVES. A WISER TOMORROW.

After hours of exploring, Mira's skepticism has softened.

I can see how this fits together. The four planes give it shape.

And the different fields help us test and recognize the frameworks.

It's not just abstract ideas — it's a real way to explore, understand, and live more wisely.

That's the heart of it, Mira. Wondrous Wisdom isn't owned by any one field, person, or culture. It's a shared human adventure — building understanding together.

I have so many more questions now. In a good way.

More to explore tomorrow...

SAME QUESTIONS. A WISER TOMORROW.

They continue deeper into the Garden of Investigations, into a great hall of diagrams...

Wow...
This place keeps getting more incredible.

Here we see how inquiry goes beyond the self. It's a chain of perspectives that links God's investigations and human investigations.

INVESTIGATIONS

THE INVESTIGATIONS
OF PARTICULAR
PERSONS.

HUMANITY
INVESTIGATES
THROUGH
THE INVESTIGATIONS
OF THE
COMMON PERSON.

TOGETHER,
OUR INVESTIGATIONS
CONNECT,
ENRICH,
AND LEAD TO
A WISER HUMANITY.

DIFFERENT PERSPECTIVES.
A SHARED JOURNEY.
A BRIGHTER TOMORROW.

Let's explore each station in the chain...

1. COMMONALITY / GOD

The largest perspective.

We begin with the big picture — the reality we all share. God is the source of all that exists, the deepest commonality beyond any individual view.

So this isn't about one religion, but about the biggest perspective we can imagine? The common ground?

Exactly. It's the shared source — the foundation for all investigations.

2. GOD'S INVESTIGATIONS

Persons · Cycles · Three Minds · Dance of God
Lived Cycles · House of Knowledge · Science of Love

Persons
Relationship
and communion

Cycles
Ongoing
processes

Three Minds
Different ways
of knowing

Dance of God
Dynamic,
creative activity

Lived Cycles
Life, growth,
and renewal

House of
Knowledge
A place of learning

Science of Love
Understanding
through love

God investigates through the investigations of particular persons.

These are different aspects of how the divine is known and explored — through relationship, cycles, multiple minds, a dynamic dance, lived experience, a house of knowledge, and a science of love.

3. MY GOD

The human perspective.

Each person has a personal understanding of God, shaped by their own life.

Life Table
Key events,
relationships,
and learnings

Life Equation
A personal way
to make sense
of life

The life table and life equation? That I can relate to. It's like making sense of my own story.

Yes. Your investigations matter. They are a real part of the whole.

4. YOUR GOD

Human investigations.

Levels of
Awareness
How we see
and understand

Morality
What is right
and good

Needs
What we need
to live and grow

Doubts
Questions
and uncertainties

Expectations
What we hope
for

Values
What we consider
important

This feels familiar — the real questions people struggle with. We all have doubts and different values. Isn't that a problem?

It's part of the process. Humanity investigates through the investigations of the common person. Our questions, struggles, and values are essential to understanding.

5. OTHER'S GOD

Commonalities.

By exploring others' perspectives, we discover shared questions and commonalities, even in our differences.

So the chain moves from the largest view, through God's investigations, then my view, your view, and finally to others — and we find common ground again. That's how inquiry goes beyond the self.

Yes. Each perspective needs the others. Together, they form a richer, truer picture — and lead to a wiser humanity.

It's a humbling map. My questions are just one link in a much larger chain.

And that's the beauty of it. Your questions matter, and so do everyone else's. The more perspectives we explore, the more we understand — together.

SAME REALITY.
MORE PERSPECTIVES.
A WISER TOMORROW.

The Three Minds

OBJECTS. PROCESSES. PERSON.

Same mind.
More understanding.
A calmer tomorrow.

Later that afternoon, Mira is back in the Garden, reflecting on a recent argument...

1. The bodily reaction

2. The thinking mind

3. A choice

Mira writes in her notebook...

The Three Minds
1. pasamoné — subconscious
2. samoné — consciousness
3. samoningumas — awareness
Objects. Processes. Person.
Notice. Understand. Choose.

The Three Minds

THREE WAYS OF DIRECTLY ATTENDING, THREE THINGS GROUNDED

Same reality.
Three minds.
A wiser you.

Awareness can attend to the subconscious (e.g., notice the body or the world) or to consciousness (e.g., notice thoughts, feelings, concepts). It chooses where to place attention.

samoningumas awareness
(conscious attentiveness)
What directly attends, chooses between the other two, and grounds the person.

The three minds are always present. In any moment, awareness can turn toward what is happening in the world and body, or toward what is happening in the mind. This is what allows us to understand, learn, and live wisely.

pasamoné subconscious
Directly attends to other things (the external world and the body), and grounds objects.

PERSON

The one who lives, chooses, and gives meaning.

samoné consciousness
Directly attends to itself, and grounds, processes, concepts, questions, and negation (e.g., "not").

PROCESS

Thinking, feeling, concepts, questions, imagination, and even negation.

OBJECT

Things, events, the body, the world.

Together they form our experience. Guided by awareness, they ground a person.

Back to Mira's situation...

The subconscious — objects

My chest tightens. Heat. Tension. The subconscious directly attends to my body and the situation — other things. It grounds the objects of my experience: my body, his words, the environment.

OBJECTS

Consciousness — processes

Now my mind thinks about it. What does it mean? Why did he say that? Am I overreacting? What should I do? Consciousness directly attends to itself. It grounds the processes — my thoughts, feelings, concepts, questions, and even the sense of "not" ("Maybe I'm not good enough").

What does it mean? Why? Should I? Maybe not...

PROCESSES

Awareness — the person

And now I notice all of this. I am aware. I can choose: Do I stay in the spiral of thoughts, or return to my body, or both? Awareness directly attends, chooses between the other two, and grounds the person — me.

Notice
Choose
Respond
Live more wisely

PERSON

Back in the Garden of Investigations, Mira is ready for a deeper question.

We've talked about everything, different perspectives, and the four planes. But how does all of this help me live? It still feels scattered. Is there a single picture that brings it together?

There is. It's called **the life equation**. It's not a formula for calculating life, but a way to see how the deepest realities are related and how they shape the way we live.

"IDEAS"
PEOPLE
PERSPECTIVES
CULTURES
A RICHER
HUMAN FUTURE

A life equation? That sounds complicated. I'm not sure I can grasp it.

Good. It's a big idea. But we can read it together, step by step.

The life equation describes our relation with what lies beyond imagination. It gives us a way to think about how we live — connecting the deepest realities with our everyday choices.

More than facts.
A way of living.
The Life Equation.
Bigger than we imagine.
Closer than we live.

So it's not just theory? It's about real life?

Exactly. It helps us see the whole picture. There are four levels, and each level shows a different way we relate to reality. Let's look at the complete diagram first.

The Life Equation

Four levels. A deeper wholeness. A wiser way to live.

Level	What is ultimate?	What gives freedom?	What shapes our life?	What is the highest good?
1. Spirit 	God	goodness	life	eternal life
2. Structure 	everything	freedom	anything	wisdom
3. Images 	desires	identities	choices	good will
4. Unity 	love	perfection	will	God's will

A LIFE MORE HUMAN. A WISER TOMORROW.

Wow. This is a lot to take in. Can we go through each level? I want to understand what these words really mean.

Yes. Each level looks at the same four big questions: What is ultimate? What gives freedom? What shapes our life? What is the highest good? Let's go one by one.

SAME REALITY.
MORE PERSPECTIVES.
A WISER
TOMORROW.

Reading the Life Equation

 1. Spirit	God The ultimate reality is God, beyond our imagination.	goodness True freedom comes from goodness.	life Our life has deeper meaning in God's life.	eternal life The highest good is eternal life with God.	This level looks at what is beyond our imagination, the source of all reality. It gives the deepest context for life.
 2. Structure	everything Everything exists within a vast, ordered reality.	freedom We have real freedom to explore, learn, and create.	anything Anything is possible within the structure of reality.	wisdom The highest good is wisdom — right understanding.	This level looks at the structure of everything — the laws, order, and possibilities of reality.
 3. Images	desires Our desires point to what we seek and value.	identities We are shaped by the identities we hold and can grow beyond.	choices Our choices shape our lives and the lives of others.	good will The highest good is a good will — wanting what is good.	This level looks at our inner world — our thoughts, feelings, desires, identities, and choices.
 4. Unity	love Love is the deepest connection.	perfection We are called toward greater wholeness and perfection.	will Our will can align with a greater will.	God's will The highest good is living in God's will.	This level brings everything together — relationship, meaning, and a life lived in unity with the deepest reality.

I can see how it fits together now. It reaches from the deepest reality all the way to my everyday choices. It's both huge and personal.

That's exactly it. The life equation is challenging, but it's also a gift. It helps us live with a wider vision.

It still feels difficult. But it's also beautiful. It gives me a way to think about how I live.

To make it practical, we can also look at human life through four guiding questions: our needs, doubts, expectations, and values.

Human life can be explored through:

- needs
- doubts
- expectations
- values

Same questions. A deeper life.

My Notes

- The life equation
 - Spirit — God, goodness, life, eternal life
 - Structure — everything, freedom, anything, wisdom
 - Images — desires, identities, choices, good will
 - Unity — love, perfection, will, God's will
 - Human life — needs, doubts, expectations, values
 - A way to think about how I live.
- Bigger questions. A wiser me.

Later that week, a community gathering in the Garden of Investigations...

Thanks for coming. Today we're exploring a real decision: Should we expand the greenhouse and restore the habitat around it?

Let's use four practical lenses to understand the different perspectives — our needs, doubts, expectations, and values.

Good. This isn't about winning a debate. It's about understanding well enough to make a wiser decision together.

These four lenses help us look at the same issue from different angles. Everyone's perspective matters.

Let's look at each one.

FOUR PRACTICAL LENSES FOR HUMAN INVESTIGATIONS

Needs

What do people and living things need?

Doubts

What questions should we ask?

Expectations

What do we hope will happen?

Values

What matters most to us?

HUMAN NEEDS

The basics for a flourishing life (for all people, and the living world).

life

(health, clean air, food, water)

safety

(protection, stability)

belonging

social connection (community, care)

value

self-worth (respect, dignity)

opportunity

freedom (choices, possibility)

meaning

self-fulfillment (purpose, contribution)

EXPLORING DOUBTS

Helpful questions to examine our ideas.

What do I like? What feels right to me?

What is needed? What is essential here?

What is true? What are the facts? What do we know and not know?

What is difficult? What are the real challenges or trade-offs?

What is wise? What leads to a better future for more people and life?

What is just? What is fair and respectful to everyone affected?

EXPLORING EXPECTATIONS

What do we hope might happen? What are we afraid might happen?

We hope for healthier people and a greener, more beautiful city.

We hope for more learning opportunities for young people.

We hope for local jobs and a stronger community.

We are concerned about costs, maintenance, and unintended consequences.

We worry it might not work as planned.

We hope it will be a model for other neighborhoods.

EXPLORING VALUES

What matters most? Different people may emphasize different values.

Care for nature and future generations

Community well-being and inclusion

Responsibility and stewardship

Fairness and justice

Learning and curiosity

Beauty, meaning, and a better tomorrow

Different needs. Honest doubts. Real expectations. Shared values. A clearer conversation. A wiser tomorrow.

The conversation begins...

For me, this is about health. More plants mean cleaner air, cooler neighborhoods, and a better life for my kids.

My need is life. I value a healthy community.

I love the idea, but I worry about safety and costs. Who will maintain it? And what if it takes resources from other urgent needs?

My doubts are real. I value responsibility and fairness.

As a teacher, I see huge opportunities. This could be a living classroom — for science, art, and community learning.

I hope it inspires young people. I value learning and opportunity.

I support it, but we need to be realistic. It might affect parking, and some businesses are worried about the cost.

My doubt is what is difficult. I value a thriving local economy too.

This land is also habitat. We have a chance to restore it for birds, pollinators, and all living things, not just people.

My need is the health of the more-than-human world. I value care for nature and future generations.

We should include more voices — elders, youth, and neighbors who haven't been here. This is about belonging and justice.

My doubt is whether everyone has been heard. I value inclusion and a community where everyone matters.

I'm excited, but I wonder if it's just a feel-good project. What is true? Will it really make a difference?

My doubt is what is true. I value honesty and evidence.

DIFFERENT PERSPECTIVES A STRONGER COMMUNITY

Mira listens, taking notes... She feels the complexity — and the possibility.

You're all bringing something important. Different needs, doubts, expectations, and values. They don't always line up, and that's okay. It helps us see the bigger picture.

Maybe we can look for ways to meet multiple needs. For example, a phased expansion that protects habitat, includes community input, and creates learning opportunities.

We can test ideas, be transparent about trade-offs, and keep asking our questions.

This isn't about having the perfect answer today. It's about a thoughtful next step, together.

REAL PEOPLE REAL QUESTIONS REAL PROGRESS

Well said, Mira. You're not just asking questions anymore — you're helping people think together.

So, shall we form a small working group to explore a proposal and bring more voices in? We can use these four lenses to guide us, and report back to the community.

Yes.

Let's do it.

Count me in.

Me too.

This feels like a real start.

I'll help.

SAME PEOPLE. DEEPER CONVERSATIONS. A WISER TOMORROW.

As the meeting ends...

Real change starts with people listening, asking better questions, and caring about what matters.

We all have needs, doubts, expectations, and values. It's a messy process. But it's how we build a wiser tomorrow.

MORE PERSPECTIVES. BRIGHTER POSSIBILITIES.

Later, as the afternoon light fills the Garden...

I've been thinking about how I see things. My perspective feels so real — my thoughts, my feelings, my experiences. But then I meet someone else, and they see the same situation completely differently.

How do we hold all these perspectives together without getting lost?

That's the heart of it, Mira. We all see from a particular place. But wisdom grows when we realize that our perspective is one voice among several — and when we learn to relate those voices.

Wondrous Wisdom works with four persons or perspectives: God, Me, You, and Other.

Four? Why those four?

Because every question, every experience, every insight touches all four in some way. They give us a complete picture: our own inner world, the other person in front of us, the wider world of people and creation, and the ultimate source of meaning and value.

MORE PERSPECTIVES
DEEPER UNDERSTANDING
A MORE HUMAN FUTURE

So when I'm in a conversation, I can try to see not just my point of view, but yours, and also how it connects to the bigger picture and to something greater than us.

It's like zooming out.

Yes. Perspective-taking opens deeper understanding. It doesn't mean we lose our own voice, but that we listen, imagine, and explore how the different perspectives relate.

Wisdom is not only self-expression. It's relation, conversation, and shared understanding.

When I really listen to someone, something changes. I start to see the world through their eyes — their history, hopes, and fears. It doesn't erase my view, but it widens it.

And then I can see how we both fit into a larger story.

That's the movement of wisdom — from "just me" to "me and you" to "all of us" — and always in relation to God.

CURIOSITY
KINDNESS
DIALOGUE
A WISER HUMANITY

Different people. Different perspectives. A shared search.

SAME REALITY. MORE PERSPECTIVES. A WISER TOMORROW.

The Four Persons of Wondrous Wisdom

Different perspectives. A deeper understanding. A more human future.

I like this. It's not about having the right answer on my own, but about staying in the conversation — with you, with others, with the world, and with God. Each perspective opens a new layer of understanding.

It feels less intimidating and more hopeful.

That's what Wondrous Wisdom is about. The four persons remind us that we are always in relation — not isolated minds, but connected seekers. The more perspectives we can take, the more wisdom we can live together.

And the journey continues.

DIFFERENT PERSPECTIVES. DEEPER CONVERSATIONS. A MORE HUMAN FUTURE.

More to explore tomorrow...

Theory Translator

DIFFERENT FIELDS. DEEPER CONVERSATIONS.

More perspectives.
Clearer understanding.
A wiser tomorrow.

This place is amazing. You're really comparing ideas across fields?

Yes. This is a translation lab. We look for deep patterns across disciplines to help us understand, test, and communicate cognitive frameworks.

So advanced mathematics, physics, psychology, the arts, morals, even the history of ideas all have a role here?

Exactly. Each field sees part of the picture. We don't replace any of them. We help translate — to make their ideas more comparable, discussable, and useful together.

Here we compare how different fields describe similar cognitive processes — like attention, learning, or meaning.

Same pattern, different language.

This doesn't force agreement. It highlights useful parallels and real differences.

It gives us a richer conversation.

Ideas travel...

Mathematics ↔ Models
Physics ↔ Dynamics
Psychology ↔ Mind & behavior
Neuroscience ↔ Brain systems
History of ideas ↔ Context
Arts ↔ Imagination
Moral disciplines ↔ Values
Theology ↔ Ultimate meaning
Everyday life ↔ Experience
Different languages.
Shared human questions.

I'm starting to see it. It's not about making everyone say the same thing.

Yes. Translation, not uniformity. More perspectives. A wiser humanity.

It's about finding ways to compare their deep structures — so we can learn from each other.

Mira and Andrius look at a central diagram in the lab.

This diagram is beautiful. It shows how different fields can illuminate the same cognitive framework from different angles.

Each field has unique tools, questions, and kinds of evidence. The Theory Translator helps us see connections, differences, and possibilities for dialogue.

Many fields.
Shared questions.
Richer answers.

Theory Translator

DIFFERENT FIELDS. DEEPER UNDERSTANDING.

Not a replacement.
A bridge.
A more human future.

Different perspectives.
Common humanity.

Translation among fields can help us recognize, test, and communicate cognitive frameworks — for a wiser humanity.

More understanding.
More possibilities.

So Wondrous Wisdom gives us a way to bring all these perspectives into conversation — not to erase their differences, but to make them more comparable and discussable.

That feels empowering. There's so much more we can learn together.

Yes. Each field remains essential. The Theory Translator helps us translate — to see deeper connections, notice real differences, and find better questions.

More perspectives.
Clearer understanding.
A wiser tomorrow.

SAME REALITY.
MORE PERSPECTIVES.
A WISER HUMANITY.

Ideas travel further together.

Back in Vilnius, in the community space...

We talked about the language of wisdom — and how different fields offer different lenses, but can learn from each other.

We explored the four planes of Wondrous Wisdom — the structure that helps us make sense of it all.

We talked about the three minds — all working together.

We reflected on the life equation.

A meaningful life =
what you need + what you value +
what you expect — what you doubt
(lived with greater awareness)

It's not a formula for perfection. It's a way to stay curious about what really matters, and to keep adjusting as we learn and grow.

Needs, doubts, expectations, and values shape our choices.

We discussed levels of awareness, and the four persons we each carry within us.

And we saw how ideas can travel across fields — how a concept from one area can illuminate another.

The conversation was honest and lively.

We listened, disagreed, and learned from each other.

Later, as the day winds down...

That evening, Mira returns to the Garden of Investigations.

The Atlas of Wondrous Wisdom

Many maps. One human journey.
